Coding Wizards: Team Charter

1. Personal Goals

- As a team, we aim to become better web developers and work with a diverse group of individuals. We aim to sharpen our communication skills. By improving our communication skills our team will work more efficiently because we are able to coordinate work among different members of our team. Furthermore, we want to exceed the expectations of our peers and TAs on assigned projects.

2. Values, Mission, and Common Goals

Collective Team Values

- Write clean, organized code
- Clear communication
- Quality over quantity
- Collaboration/equal distribution of work

Conflict Resolution

- Time scheduling conflict: Avoid by clearly communicating deadlines well in advance (at least 3 days before due date).
- Disagreements between two members: Introduce a third person to make the final decision. Or use a random number generator.
- Missing deadlines: If possible, extend the deadline. Offer help to the person who missed the deadline. Identify what caused the deadline to be missed to avoid it happening again.
- Address situations when rules aren't followed: 1st time: warning. 2nd time: kept on record. 3rd time: group intervention. 4th time: TA involvement
- If a member is not responding, contact team leads (Tybalt and Anand) Set up transparent communication protocols: Use Slack workspace channels On M-F, members must respond within 24 hours. Roles: TBD To address the issue of not everyone being able to meet at the same as one team, we will split our team into smaller groups and have these groups meet together on their own.

3. Strengths/Weaknesses:

- Tybalt:
  - Strengths: Has experience with large agentic pipelines with his research in computer vision. C++, Python
  - Weakness: Web dev front end. Javascript.
- Anand:
  - Strengths: Has experience with large-scale data science projects. Python, SQL
  - Weaknesses: Javascript, debugging issues in code
- Steven:
  - Strengths: Cloud Infrastructure, flexible on front end and backend systems, primary languages Typescript, Golang
  - Weaknesses: Enjoys coding more than designing

- Jennifer:
  - Strengths: Privacy & security, backend mostly, fine w anything
  - Weaknesses: unit testing
- Lorenzo:
  - Strengths: Some experience with Web Dev, Python, Java, some C++, backend, open to learn and do anything
  - Weaknesses: debugging, design
- Anlisa:
  - Strengths: Has some experience with HTML, CSS, Javascript(its been a couple of years though, might have forgotten quite a bit) Has some experience in c++, java but its the beginner stuff I think., like the lower div req classes mainly.
  - Weaknesses: Debugging faulty code/ errors, also not good at planning before coding
- Omar:
  - Strengths: Good understanding in front end and have a decent amount of work with back end.
  - Weaknesses: Not good at planning, I'm not the fastest typer
- Abhay:
  - Strengths: General understanding of both front and backend, ML and cybersecurity knowledge.
  - Weaknesses: Don't enjoy Webdev and haven't really done it much
- Miguel
  - Strengths: Experience with front end and full stack, use of react, firebase, tailwind etc.
  - Weaknesses: Communicating and backend management.
- George:
  - Strengths: Experience with Java, C/C++, Java, HTML/CSS
  - Weaknesses: I do not have much experience with frontend or desgin
- To address our weakness in front-end/design, we will distribute the workload of that aspect of the project.

4. People, Roles, and Accountabilities

- Front-End/Design: Jennifer, Miguel, Anand, Lorenzo
- Back-End: Omar, Abhay, George, Eric, Anilisa
- Project Manager: Tybalt, Anand
- Testing/QA: Everyone
- Communications/PR Department: Steven

5. Needs and Expectations

6. Rules and Activities
